GREENHOUSE TIPS

Combat the high cost of heating.

Double Poly_3

The state/age and repair (maintenance) of your double poly roofing system drastically effects your bottom line

ENERGY CONSERVATION SERIES - DOUBLE POLY CLADDING

Is a great cladding system when all things are good. If things not good, a nose bleed.

We received some feed back from our, issue Double Poly_2 asking for further information on the poly check valve assemblies.

These are quite useful in jumpering applications. Ie: a sidewall from a roof or a common fan.

These will stop side walls or roofs exposed under high wind loads from

deflating when commonly connected to roofs other side walls or inflation fans.

Extends life of poly, increases poly U valves (less heat loss) and stops the darn flapping in the wind conditions.

These are available in both 3" and 4" ducting connections.
